

HUBTRAN INTERFACE WITH POWERBROKER®

McLeod Software's PowerBroker has a seamless integration with HubTran to quickly process incoming carrier documents and invoices. PowerBroker communicates load and carrier data to HubTran, then HubTran returns approved invoice data and documents to PowerBroker. When the carrier sends in invoices and supporting documents for billing, the audit process is completed more quickly to allow brokers to bill faster with less cost and effort from the back office.

Order and load data is continuously communicated to HubTran. HubTran uses optical character recognition and artificial intelligence technology to match documents to existing load data, auto classify and organize the documents, and validate the invoice and supporting documentation against load information and business requirements.

Customers can easily manage carrier payables and documents through HubTran's web portal. Once invoices are approved in HubTran, orders, movements, bill processing, and settlements are automatically updated in PowerBroker, and document images are stored directly to McLeod's DocumentPower™. Customer bills can then be created to complete the workflow, and posted invoices flow to accounting as the normal cash collection process begins.

HubTran technology uses machine learning to automate document classification and payables auditing, while enabling the broker to remain in control of the process. Using HubTran's interface with PowerBroker to handle carrier documents and

Movement Screen with HubTran approved invoice

payables saves time, effort, and money. Faster, more accurate back office processes speed the broker's billing process and improves carrier relations.

Features

- Load data automatically sent to HubTran
- Automated data updates following invoice approval from HubTran
- Seamless integration with McLeod's DocumentPower for document import

Benefits

- Increases back office efficiency
- Reduces time spent auditing and organizing carrier documents
- Improves accuracy of customer billing and carrier payments
- Reduces back office costs
- Eliminates keystroke errors
- Closes bill processing gaps
- Reduces time spent searching for documents
